**DETAILED ACTION**

This application filed February 8, 2001, is a continuation in part of application 09/312,351, filed May 14, 1999.

Applicants' amendment filed March 4, 2006, has been received and entered. Claims 7-12 have been canceled. Claim 1 has been amended. Claims 1-6 and 13 are pending and currently under examination.

***Election/Restriction***

As noted in previously, Groups I and II have been rejoined.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

***Claim Rejections - 35 USC 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-6 and 13 rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one

skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention is withdrawn.

Previously, the recitation of “eliminates subsequent transport of said molecule across said membrane by the transduction signal” was considered new matter. The amendment to claim 1 to include language supported by the instant specification has obviated the basis of the rejection.

### ***Reasons for Allowance***

The following is an examiner’s statement of reasons for allowance:

As indicated previously, the art teaches that chemically linking molecules to proteins such as TAT allow for better *in vivo* uptake of molecules (for example Lee *et al.* Bioconjugate Chem 2001 12 :995-999, and Moulton *et al.* Drug Discovery Today 9(20):870), and at the time of filing that other types of proteins conjugated to polynucleotides were being tested (see for example Kang *et al.* Drug Metab Dispos. 1995 Jan;23(1):55-9). However, the claims are free of the art of record because the art fails to teach compounds with the structural and functional properties of those instantly claimed. Moreover, the present specification provides the necessary guidance to produce the claimed composition. In particular, the cross-linker with the defined functional properties used and covalently linked to the transduction signal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
